Mosaic

The mosaic consists of small-dimensional elements whose edge length does not usually exceed 100 mm. Their connection - gluing on a suitable substrate (e.g. fabric or bond "Joint-point" system), a mosaic is formed on the network. This makes it easier to work with it: a hobby or scissors is sufficient to divide. Mosaic on the net is an excellent choice for tiling rounded places. Also suitable for wall and shower tiles. It may be glass, stone or ceramic.
